ABSTRACT:

PURPOSE: To increase (improve) the volume/time yield of a fixed-bed reactor for the production of bisphenol A.

CONSTITUTION: A gel-like or macroporous sulfonic acid type ion exchange resin is filled into a columnar fixed-bed reactor to obtain the objective ion exchange resin bed for increasing the volume/time yield of the fixed-bed reactor for the production of bisphenol A from phenol and acetone. A lower layer part which occupies 75-85% of the total volume of the resin bed comprises

a resin having a low crosslinking degree (
